

MobiusEMS: Complete Enterprise Product Brochure & Feature Catalog

A Comprehensive Business & Operational Guide to Every System Capability

Mobius Bloom Venture Pvt Ltd | Deployment: <https://employee.whalexy.com>

Product Version: v2.0-PROD | Document Type: Enterprise Product Collateral

SECTION 1: EXECUTIVE VISION & PLATFORM PHILOSOPHY

The Modern Dilemma: The "5-Tool Trap"

Growing enterprises struggle with operational tool sprawl. A typical company juggles:

- Biometric Time Clocks:** Prone to hardware breakdowns, long entrance queues, high maintenance contracts, and useless for field or remote staff.
- Disconnected Task Boards (Jira/Trello):** Tasks are logged in isolation, completely separated from attendance, employee compensation, and capacity.
- Subjective Spreadsheet Appraisals:** Annual reviews conducted months after work was done, plagued by recency bias, personal favoritism, and lost evidence.
- Standalone CRM Tools (Salesforce/HubSpot):** Expensive per-seat software that has no visibility into employee capacity, leaves, or actual realized accounting revenue.
- Scattered Personnel Folders:** Resumes lost in inboxes, training records in spreadsheets, and zero centralized compliance audit trails.

The MobiusEMS Solution

MobiusEMS replaces this tool sprawl with a single, role-aware operational workspace. It connects daily work execution, verified geofenced attendance, skill capabilities, objective performance evidence, talent acquisition, and commercial sales territories into one coherent, intelligent platform.

Our Three Guiding Product Principles

- Deterministic Mathematics Over Hallucinatory AI**
Software should calculate facts, not guess them. All performance evaluations, KPI attainment percentages, attendance determinations, sales commissions, and contribution percentiles are computed using pure mathematical formulas. AI is strictly an advisory assistant—it is barred from making or modifying promotion, compensation, disciplinary, or termination decisions.
- Respectful Accountability Over Invasive Surveillance**
We reject invasive employee spyware. There are no background keyloggers, no secret screen grabbers, and no 24/7 mobile GPS stalking. Accountability is measured where it matters: physical presence at shift boundaries via office geofencing and verifiable delivery of completed, peer-reviewed work.
- Built-In Data Privacy & Local Zero-Retention Voice**
Voice-to-task recognition runs locally on host infrastructure. Spoken voice commands are transcribed and the ephemeral audio file is shredded immediately. Your employees' voice recordings are never sent to third-party cloud speech APIs and never stored on disk.

SECTION 2: WORKFORCE & ORGANIZATIONAL INTELLIGENCE

1. Unified Employee 360 Longitudinal Profiles

- The Business Need:** Employee records are usually scattered across paper files, payroll sheets, and HR inboxes, making it impossible to see an employee's full journey.

- **How It Works:**
- Every team member has a comprehensive Employee 360 profile connecting employment terms, statutory identification (PAN, Aadhaar, Tax IDs), bank details, emergency contacts, active projects, and verified skills.
- **Longitudinal Career Timeline:** An immutable, chronological record tracking every promotion, designation change, salary adjustment, department transfer, and milestone award throughout their company tenure.
- **Profile Completion Health Score:**
- The system continuously calculates a profile completion percentage based on mandatory statutory and personal fields. Employees with incomplete profiles receive automated, polite reminders during their weekly check-ins.

2. Dynamic Organizational Hierarchy & Visual Org Chart

- **The Business Need:** Rigid organizational charts require vendor support or database changes whenever a team restructures or scales.
- **How It Works:**
- Configure multi-tier Departments, Teams, and Designations with defined reporting managers and approval paths.
- **Interactive Visual Org Chart:** An interactive graphical hierarchy viewer displaying company reporting trees from executive leadership down to individual contributors.
- Allows managers and HR to explore sub-teams, evaluate headcount distribution, and spot vacant positions at a glance.

3. Resumable Onboarding & First-Login Security

- **The Business Need:** New hires are overwhelmed with paperwork on day one, and default passwords create immediate security risks.
- **How It Works:**
- When HR adds an employee, the system provisions an account, generates temporary credentials, and emails a secure invitation link.
- **Mandatory First-Login Password Change:** The new hire is automatically redirected to set a private, secure password before accessing any platform feature.
- **Resumable Onboarding Wizard:** A step-by-step setup guide allowing employees to upload identity documents, verify emergency contacts, and complete their profile at their own pace without losing progress.

SECTION 3: SMART ATTENDANCE & LEAVE MANAGEMENT

4. Zero-Hardware Geofenced Browser Check-In

- **The Business Need:** Biometric machines cost ₹40,000–₹1,50,000 per facility, break down constantly, and fail completely for remote staff, client-site visits, and field sales teams.
- **How It Works:**
- Employees simply open the platform on their mobile or laptop browser and tap **"Check In"**.
- **300-Meter Spherical Geofence:** The system checks the employee's current GPS coordinates against the registered office location using spherical distance calculations. If within 300 meters, check-in is instantly approved.
- **GPS Anti-Spoofing Guard:** Rejects location readings with accuracy fuzzier than 200 meters, automatically preventing location-spoofing emulators and mock GPS apps.

5. Automated Late Arrival & Half-Day Work Calculations

- **The Business Need:** HR managers spend days at month-end calculating late arrivals, short shifts, and half-day deductions manually.
- **How It Works:**
- **11:30 AM Cutoff Rule:** Morning check-ins completed after 11:30 AM are automatically tagged as LATE.
- **4-Hour Minimum Shift Rule:** Upon checkout, shift duration is computed. Any shift totaling under 240 minutes (4 hours) is automatically classified as a HALF_DAY.
- **5-State Daily Attendance Taxonomy:** Every workday is categorized into PRESENT, LATE, HALF_DAY, ON_LEAVE, or ABSENT.

6. Attendance Regularization & Manager Approvals

- **The Business Need:** Network glitches, urgent field client visits, or transit delays lead to unfair absent marks and payroll disputes.

- **How It Works:**
- Employees submit an Attendance Regularization Request explaining the reason (e.g., client visit, travel delay) with timestamp corrections.
- The request routes directly to their reporting manager's dashboard.
- Upon manager approval, the attendance record is updated, and an immutable entry is logged in the compliance audit trail.

7. Integrated Multi-Tier Leave Quota Management

- **The Business Need:** Untracked leave balances cause operational understaffing and holiday entitlement disagreements.
- **How It Works:**
- Configurable annual quotas for Privilege Leave (PL), Casual Leave (CL), Sick Leave (SL), and Unpaid Leave.
- **Overlap Validation:** Blocks duplicate or overlapping date submissions automatically.
- **Team Calendar Sync:** Approved leaves instantly update department availability calendars so managers never schedule critical client deliveries during team shortages.

8. Real-Time Department Attendance Register

- **The Business Need:** Executives and department heads need an instant morning headcount without calling team leads.
- **How It Works:**
- Real-time morning register showing who is present, who is late, who is working a half-day, who is on approved leave, and who is absent.
- Instant department filters and date pickers for fast auditing.

SECTION 4: PROJECT DELIVERY & VISUAL TASK EXECUTION

9. Interactive 7-Stage Kanban State Machine

- **The Business Need:** Tasks logged in standalone tools (Jira/Trello) live in a silo, disconnected from employee attendance, HR records, and appraisals.
- **How It Works:**
- Visual Kanban boards where tasks progress through strictly validated stages:

$$\text{Not Started} \rightarrow \text{In Progress} \rightarrow \text{In Review} \rightarrow \text{Completed}$$
With supported exception branches: Blocked , Reopened , or Cancelled .
- Invalid state jumps (e.g., jumping from Not Started directly to Completed) are structurally blocked.

10. Real-Time Blocker Escalation & Management Alerts

- **The Business Need:** Projects miss deadlines because developers get stuck on dependencies (waiting for client API keys, missing design assets) and nobody notices until the end of the sprint.
- **How It Works:**
- Any team member can flag a task as BLOCKED and choose the exact impediment category (External Dependency, Missing Design Assets, Infrastructure Outage, Requirement Ambiguity).
- Flagging a blocker immediately triggers an alert on Manager and Department Head dashboards.
- **Fairness Protection:** If a blocker is categorized as an external dependency, the employee is automatically protected from reliability scoring penalties during evaluations.

11. Cycle Time & Quality Rework Tracking

- **The Business Need:** Subjective finger-pointing over why tickets take long or why code is buggy.
- **How It Works:**
- **Cycle Time:** Measures total elapsed hours from when work begins until final sign-off.
- **Rework Counter:** Automatically increments each time a ticket fails review and bounces back to In Progress or Reopened. High rework counts highlight ambiguous requirements or specific training needs without subjective bias.

12. Centralized Task Tracker Grid

- **The Business Need:** Project leads need to review all tasks across multiple projects, employees, and deadlines in one place.
- **How It Works:**
- A comprehensive tabular grid with multi-column filtering by assignee, priority (Low, Medium, High, Critical), project, deadline, and status.
- Instantly reveals individual workload distribution and identifies approaching deadlines.

13. Append-Only Immutable Task Activity Stream

- **The Business Need:** Lack of accountability when task deadlines slip, requirements change, or tickets get reassigned.
- **How It Works:**
- Every status change, priority shift, assignee handoff, and discussion comment is recorded in an immutable historical activity log with actor name and timestamp.

SECTION 5: LOCAL ZERO-RETENTION VOICE-TO-TASK AI

14. Multilingual Speech-to-Task Recognition

- **The Business Need:** Field workers, engineers, and busy managers skip logging tasks because typing descriptions and hours on mobile keyboards is tedious.
- **How It Works:**
- Users tap the microphone button on mobile or desktop and speak their update.
- Supports **English, Hindi, Bengali, Tamil, Telugu, Marathi, Gujarati, Kannada, Malayalam, Punjabi, and Urdu.**

15. Guaranteed Audio Shredding & Zero Retention

- **The Business Need:** Cloud speech APIs (Google Cloud, OpenAI) store recordings, leak proprietary client information, and incur expensive per-minute transcription fees.
- **How It Works:**
- Speech transcription runs 100% locally on your host server.
- The ephemeral voice recording is processed in memory and shredded immediately after transcription. Audio files are never saved on disk or sent to the cloud.

16. Intelligent NLP Intent & Entity Parser

- **The Business Need:** Voice commands must translate into actionable database records, not just raw text dumps.
- **How It Works:**
- **Prospective vs. Retrospective Intent:** Distinguishes between future task creation ("need to fix database tomorrow" $\implies$ creates task in TODO) and retrospective work logging ("finished client slides in 2 hours" $\implies$ moves task to IN_REVIEW with 2 actual hours logged).
- **Spoken Duration Extraction:** Translates spoken phrases ("two hours", "दो घंटे") into numeric task durations.
- **Compound Hinglish Splitting:** Automatically splits compound spoken commands ("Ayush ko frontend do aur Priya ko backend do") into distinct task assignments.

17. Human-in-the-Loop Confirmation Card

- **The Business Need:** Autonomous AI errors could create inaccurate tasks or assign wrong team members.
- **How It Works:**
- Voice transcripts are never committed blindly. An editable preview card pops up showing the extracted title, assigned owner, estimated hours, and priority, allowing the user to make instant adjustments before confirming.

SECTION 6: CAPABILITY MATRIX & TIMED ASSESSMENTS

18. Standardized Skills Taxonomy & Competency Catalog

- **The Business Need:** Organizations lack a standard vocabulary for technical and domain competencies, leading to confusion during project staffing.
- **How It Works:**
- Centralized catalog of core Technical, Operational, and Domain skills, each rated across 5 proficiency levels (1 = Beginner, 5 = Master/Authority).

19. Two-Tier Skill Verification & Evidence Links

- **The Business Need:** Employees exaggerate resumes with claimed skills they cannot back up.
- **How It Works:**
- **Self-Reported Ratings:** Employees rate their own skills (1–5) and provide verifiable evidence links (GitHub pull requests, project URLs, portfolio links, certifications). These remain tagged as Self-Reported.
- **Manager / Verifier Validation:** A technical lead or manager reviews the submitted evidence and officially approves or adjusts the rating. Only verified skills count toward promotion readiness.

20. Departmental Skill Heatmaps & SPOF Detection

- **The Business Need:** Companies discover knowledge gaps only when an employee resigns, halting critical client projects.
- **How It Works:**
- Visual competency heatmaps showing skill depth across departments and teams.
- **Single-Point-of-Failure (SPOF) Alerting:** Instantly highlights critical skills possessed by only one employee in the organization, prompting proactive cross-training.

21. Automated Timed Candidate & Employee Assessments

- **The Business Need:** Screening technical candidates takes weeks of manual technical interviewer time.
- **How It Works:**
- HR and leads create multiple-choice evaluations drawn from randomized question pools with strict countdown timers.
- Generates direct assessment links for job applicants.
- Automated grading delivers instant pass/fail scores, cutting screening time from days to minutes.

SECTION 7: OBJECTIVE PERFORMANCE MANAGEMENT

22. Cascading Goals & Measurable KPIs

- **The Business Need:** Employees work on day-to-day tasks without knowing how their efforts connect to company revenue or strategic targets.
- **How It Works:**
- Cascading strategic goals linking corporate objectives down to departments and individuals with defined deadlines and percentage weightings (\$W_g\$).
- **Quantifiable Key Performance Indicators (KPIs):** Objective metrics with target vs. actual achievement bounded between 0% and 200% (\$W_k\$).

23. Structured 360-Degree Performance Reviews

- **The Business Need:** Traditional appraisals are one-sided conversations vulnerable to personal bias and managerial mood.
- **How It Works:**
- Standardized review templates covering core technical skills, teamwork, communication, and leadership (\$W_r\$).

- Multi-reviewer rubrics gathering balanced feedback from peers, leads, and self-evaluations.

24. Deterministic Mathematical Scoring Formula

- **The Business Need:** Employees distrust appraisals when ratings feel arbitrary, subjective, or politically motivated.
- **How It Works:**
 - Composite scores are calculated using a transparent mathematical formula:

$$\text{Final Score} = (\text{Goals Achievement} \times W_g) + (\text{KPI Performance} \times W_k) + (\text{Review Competencies} \times W_r)$$
 - Strict performance bands ensure transparency:
 - $\geq 90\%$: **Exceptional**
 - $75\% - 89.9\%$: **Strong Performer**
 - $60\% - 74.9\%$: **Consistent Performer**
 - $< 60\%$: **Developing / Needs Support**

25. Frozen Immutable Cryptographic Snapshots

- **The Business Need:** Performance records modified retroactively create legal liability and internal distrust during compensation rounds.
- **How It Works:**
 - Once a review cycle closes, all raw metrics, reviewer feedback, mathematical weights, and final scores are frozen into an immutable snapshot record.
 - Historical snapshots cannot be altered, ensuring full compliance with corporate governance and audit requirements.

SECTION 8: CONTINUOUS CONTRIBUTION INTELLIGENCE

26. Structured Weekly Check-In Ritual

- **The Business Need:** Managers chase team members every Friday afternoon for status updates over email or chat.
- **How It Works:**
 - A structured 3-minute Friday check-in where employees record completed deliverables, next week priorities, and active blockers.

27. Rolling Deliverable Velocity Tracking

- **The Business Need:** Companies judge employees by how many hours they warm a desk rather than tangible work shipped.
- **How It Works:**
 - Automatically calculates deliverable completion rates over rolling 30-day and 90-day windows, shifting culture toward measurable output.

28. Algorithmic Peer Contribution Percentiles

- **The Business Need:** Evaluating contribution fairly across different roles without subjective ranking.
- **How It Works:**
 - Normalizes completed deliverables, commitment reliability, and rework frequency into an objective percentile score relative to peer cohorts.

29. The Evidence-Coverage Guardrail

- **The Business Need:** Employees with urgent client deadlines who forget to submit an update get unfairly penalized by automated algorithms.
- **How It Works:**
 - The platform enforces an explicit operational rule: **Never confuse missing paperwork with poor delivery.**

- If updates are missing, the system flags an **"Information Gap"** for manager follow-up rather than artificially lowering the employee's performance score.

SECTION 9: COMMERCIAL SALES & 7-TIER GIS INTELLIGENCE

30. 7-Tier Geographic Information System (GIS) Hierarchy

- **The Business Need:** National sales teams cannot visualize territory penetration down to the local district or pincode level.
- **How It Works:**
- Native 7-tier geographic mapping:

$$\text{Global} \rightarrow \text{Country} \rightarrow \text{State} \rightarrow \text{District} \rightarrow \text{City} \rightarrow \text{Area} \rightarrow \text{Pincode}$$
- Connects sales reps, customers, and leads directly to verified geographic coordinates.

31. Interactive Geospatial Density Maps

- **The Business Need:** Sales leadership cannot easily see which regions are booming and which are underserved.
- **How It Works:**
- Interactive visual maps displaying customer concentration, active field reps, lead volume, and booked revenue across states and districts.

32. Territory Ownership & Headcount Capacity Math

- **The Business Need:** Reps get overwhelmed with too many leads, causing response delays and lost deals.
- **How It Works:**
- Define geographic territories and assign sales managers and field reps.
- **Headcount Capacity Math:** Automatically computes required rep headcount based on territory lead load:

$$\text{Required Reps} = \left\lceil \frac{\text{Lead Load}}{\text{Capacity per Rep}} \right\rceil, \quad \text{Headcount Gap} = \max(0, \text{Required} - \text{Active})$$
- Flags overloaded territories immediately to prompt lead redistribution or new hiring.

33. Commercial Lead Pipeline & SLA Response Tracking

- **The Business Need:** Sales leads go cold because reps fail to follow up within agreed response times.
- **How It Works:**
- Tracks leads across $\text{New} \rightarrow \text{Contacted} \rightarrow \text{Qualified} \rightarrow \text{Converted} \rightarrow \text{Lost}$.
- **Automated Lost Revenue Warning:** Calculates financial losses when leads languish past agreed SLA response windows, alerting sales directors to missed revenue.

34. Customer Profiles & Lifetime Value (LTV)

- **The Business Need:** Disconnected buyer records lead to duplicate customer outreach and lost account history.
- **How It Works:**
- Converting a lead automatically provisions a linked Customer record, inheriting territory and currency.
- Maintains complete lifetime purchasing history and total booked revenue per customer account.

35. Commercial Opportunity Pipeline

- **The Business Need:** Forecasting quarterly revenue is impossible without visual deal probability stages.
- **How It Works:**
- Deals move through structured stages: $\text{Prospecting} \rightarrow \text{Qualification} \rightarrow \text{Proposal} \rightarrow \text{Negotiation} \rightarrow \text{Closed Won} \rightarrow \text{Closed Lost}$.

- **Mandatory Loss Reasons:** Marking a deal as Closed Lost requires a verified reason (Competitor Price, Missing Feature, Budget Cut) to guide product strategy.

36. Deduplicated Realized Revenue Ledger

- **The Business Need:** Sales reps mark deals won multiple times, distorting accounting books and commission payouts.
- **How It Works:**
 - When an opportunity is marked Closed Won, the platform books an immutable transaction into the financial revenue ledger.
- **Duplicate-Proof Idempotency:** The system enforces transaction locks—one opportunity can only ever book one revenue record. Manual adjustments are restricted to Super Admins with mandatory audit justifications.

37. Quota Allocations & Digital Target Commitments

- **The Business Need:** Reps dispute sales targets at quarter-end, claiming quotas were never officially communicated.
- **How It Works:**
 - Leadership sets monthly, quarterly, or annual targets for territories and reps.
- **Digital Commitment Signing:** Sales representatives digitally review and sign off on their assigned targets on their mobile dashboard.
- Automated reminder logs keep reps and managers informed of quota pacing throughout the quarter.

38. 5-Tier Sales Compensation & Incentive Engine

- **The Business Need:** Complex commission plans in spreadsheets cause payout errors and demotivate high-performing field reps.
- **How It Works:**
 - Advanced compensation engine supporting 5 distinct calculation models:
 1. **Proportional:** Commission scales linearly with percentage achievement up to a budget cap.
 2. **Commission Slabs:** Tiered rates (e.g., 0–80% achievement pays 2%, 80–100% pays 5%, > 100% pays 8%).
 3. **Flat Commission:** Fixed percentage of all closed-won contract value.
 4. **Target Gate:** Zero payout unless 100% quota is achieved; accelerated rates thereafter.
 5. **Hybrid:** Base salary allocation + tiered commission slabs + performance bonus.
- Configurable accelerators, minimum performance floors, and safety caps protect company budgets.

39. Channel Partner Network Ecosystem

- **The Business Need:** Managing authorized distributors, dealers, and value-added resellers (VARs) in separate spreadsheets leaves partner sales unmonitored.
- **How It Works:**
 - Track partner legal profiles, GSTIN/Tax IDs, contract terms, and assigned geographic territories.
 - Attribute closed deals directly to partner accounts to calculate commissions and track indirect revenue contributions.

SECTION 10: TALENT ACQUISITION & RESUME SCREENING

40. Standardized Job Description (JD) Library

- **The Business Need:** Hiring managers rewrite job descriptions from scratch every time an opening arises, leading to inconsistent hiring standards.
- **How It Works:**
 - Centralized repository of reusable JD templates with documented responsibilities, minimum experience years, required skills, and salary bands.

41. Visual Applicant Hiring Pipeline

- **The Business Need:** Candidate resumes get lost in recruiter inboxes, resulting in slow candidate response times and lost talent.
- **How It Works:**
 - Track candidates across structured hiring stages:
\$\$\text{Sourced} \rightarrow \text{Screened} \rightarrow \text{Interviewing} \rightarrow \text{Offer Extended} \rightarrow \text{Hired} \ ; \ / \ ; \ \text{Rejected}\$\$\$

42. Automated PDF Resume Screening Engine

- **The Business Need:** Recruiters spend hours reading hundreds of resumes to check if candidates have the basic required skills.
- **How It Works:**
 - Upload candidate resumes in PDF or DOCX format.
 - The system automatically extracts claimed skills, education history, and total years of experience.
 - Compares the candidate profile against JD requirements and computes an **Advisory Qualification Score**.
- **Human Recruiter Gate:** The score is strictly advisory. The platform never automatically rejects candidates; human recruiters make all interview decisions.

43. One-Click Applicant-to-Employee Onboarding

- **The Business Need:** When a candidate is hired, HR spends hours manually re-typing their details into HR systems.
- **How It Works:**
 - When an applicant is marked Hired, clicking "Convert to Employee" instantly provisions their Employee 360 profile, copies their resume information, generates secure login credentials, and triggers the onboarding flow.

SECTION 11: PEOPLE OPERATIONS, CULTURE & GAMIFICATION

44. Structured 1-on-1 Meeting Workspace

- **The Business Need:** 1-on-1 coaching meetings are frequently skipped or turn into unfocused chats with no follow-through on action items.
- **How It Works:**
 - Collaborative workspace with shared agendas, mutual action items with due dates, and **Private Manager Coaching Notes** for confidential coaching records.

45. Internal Training Course Catalog & Certifications

- **The Business Need:** Employees take external or internal training, but HR has no centralized record of who completed what certification.
- **How It Works:**
 - Catalog of internal courses, workshops, and external vendor trainings with certificate upload tracking.
 - Completed courses automatically update the employee's verified skill profile and capability matrix.

46. Core-Value Peer Recognitions Board

- **The Business Need:** Hard work and helpfulness go unnoticed, leading to employee disengagement and cultural drift.
- **How It Works:**
 - A public company-wide kudos board where colleagues celebrate peers who demonstrate organizational core values (e.g., Integrity, Customer Obsession, Teamwork). Recognitions feed into quarterly culture awards.

47. Private Daily Productivity To-Dos

- **The Business Need:** Employees need a simple daily task checklist, but fear having personal task notes monitored by managers.

- **How It Works:**
- A distraction-free personal daily checklist.
- **Strict Privacy Rule:** Personal to-do lists are private to the individual and are strictly excluded from manager dashboards and performance evaluations.

48. Employee Gamification, Badges & Leaderboards

- **The Business Need:** Routine administrative tasks (checking in on time, submitting weekly updates) feel tedious and get neglected.
- **How It Works:**
- Employees earn points and achievement badges for on-time check-ins, sprint velocity, completed courses, and peer recognitions.
- Departmental and company-wide leaderboards foster healthy engagement and friendly recognition.

SECTION 12: ETHICAL AI & EMAIL AUTOMATION

49. Company Policy & Handbook Q&A Assistant

- **The Business Need:** HR staff spend hours answering repetitive employee questions about leave carryover, travel expenses, and medical benefits.
- **How It Works:**
- An intelligent assistant grounded in your company's uploaded employee handbooks and HR policies.
- Provides exact, cited answers to employee questions.
- **Escalation Trigger:** If a question falls outside documented policies, the assistant automatically prompts the employee to raise a ticket with HR rather than hallucinating an answer.

50. Advisory Performance Review Draft Generator

- **The Business Need:** Managers dread quarterly appraisals because writing thorough review summaries for 10+ direct reports takes dozens of hours.
- **How It Works:**
- Synthesizes an employee's completed sprint tasks, blocker logs, attendance percentages, and KPI achievements into an objective draft review summary.
- **Strict Policy Lock:** The draft is purely advisory. Managers must review, edit, and sign off on all reviews. The system strictly bars AI from making autonomous decisions regarding compensation, promotions, or disciplinary actions.

51. Multi-Step Drip Email Campaigns (Brevo Integration)

- **The Business Need:** Manual candidate follow-ups, vendor outreach, and customer onboarding emails take hours of repetitive copying and pasting.
- **How It Works:**
- Multi-step automated email workflows with configurable delay schedules (e.g., Day 1: Welcome \$to\$ Day 3: Follow-Up).
- **Automatic Stop Conditions:** The sequence immediately halts if the recipient replies, unsubscribes, or if the email bounces.

SECTION 13: ENTERPRISE GOVERNANCE, SECURITY & COMPLIANCE

52. Tamper-Evident Historical Audit Trail

- **The Business Need:** When records, salaries, or role assignments change, organizations need verifiable proof of who made the change, when, and why.
- **How It Works:**

- Every critical system mutation (check-ins, role updates, salary changes, task transitions, document downloads) writes an immutable record to the audit trail.
- Logs actor ID, timestamp, IP address, user-agent string, and full before/after state diffs. Audit logs cannot be modified or deleted.

53. Granular 22-Section Role-Based Access Control (RBAC)

- **The Business Need:** Employees, managers, and HR administrators require strictly segregated access to protect sensitive financial and personal data.
- **How It Works:**
 - Access is governed across 22 distinct Section Permissions and granular action keys.
 - Dedicated role personas:
 - **Super Admin:** Tenant settings, billing, full system audit, access hierarchy configuration.
 - **HR Admin:** Headcount distribution, hiring pipelines, leave management, read-only sales capacity visibility.
 - **Department Head / Manager:** Team attendance register, blocker escalation, task review, team 1-on-1s, and team sales quotas.
 - **Employee:** Personal attendance, assigned tasks, self target pacing, private to-dos, and own profile.
 - **Applicant:** Restricted strictly to timed candidate assessment portals.

54. Authenticated Private Document Storage

- **The Business Need:** Sensitive identity proofs, employment contracts, and resumes stored on public cloud links can be leaked via search engines or shared URLs.
- **How It Works:**
 - All files are stored in private cloud buckets with randomized cryptographic keys.
 - Public access is disabled. Downloads require an authenticated API session: the system verifies user permissions and issues a temporary (15-minute) signed download URL.

55. Data Privacy & Multi-Tenant Isolation

- **The Business Need:** SaaS clients cannot risk their confidential employee or customer data being accessed by other organizations sharing the same software.
 - **How It Works:**
 - Complete multi-tenant data isolation ensures that every read, write, and report is strictly bound to the authenticated organization. Cross-tenant data leakage is structurally impossible.
 - Hardened session security utilizes short-lived (15-minute) access tokens and rotating refresh tokens with token theft detection.
 - Aligned with Indian Digital Personal Data Protection (DPDP) Act and GDPR compliance standards.
-

SECTION 14: SUBSCRIPTION TIERS & LICENSING

Plan Dimension	STARTER	STANDARD	PROFESSIONAL	ENTERPRISE
Max Employees	Up to 15	Up to 50	Up to 150	Unlimited
Storage Allocation	2 GB	10 GB	50 GB	Dedicated / Unlimited
Smart Geofenced Attendance	✓	✓	✓	✓
Project Kanban & Delivery	✓	✓	✓	✓
Local Zero-Retention Voice AI	✓	✓	✓	✓
Objective Performance Reviews	Goals Only	Full Reviews	Full Reviews	Full Reviews + Snapshots
Skills Matrix & Assessments	✗	✓	✓	✓
AI Handbook Policy Assistant	✗	✓	✓	✓
